Interactions

- Class diagrams illustrate *static* aspects of the system design.
- To represent *dynamic* (i.e., run time) aspects of the system we need to show *objects* and *events*.
- Interaction diagrams illustrate interaction between objects.
 - Sequence diagrams
 - A vertical line for each object involved.
 - Time runs top to bottom.
 - Events (method call) indicated by arrows.
 - Communication diagrams (a.k.a. collaboration diagrams)
 - Layout for clarity
 - Message/call sequence indicated by numbers.
 - Nested calls indicated by "." (e.g., 1.1, 1.2 ...).

Sequence Diagrams

Control Flow in Sequence Diagrams

| Іоор | [for all thingies] |
|------|--------------------|
| opt | [condition] |
| alt | [condition] |
| | [other condition] |
| | [else] |

| ref | name of interaction (args) | |
|-----|----------------------------|--|
