

Environmental Geotechniques – Engi. 7718  
Assignment #4 Solutions

Pb<sup>2+</sup> adsorbed - curve #1 langmuir equation.

Ce	0.06	1.35	3.23	5.07	6.85
mmol/L					
qe	195	264	280	291	305
mmol/kg					
Xe	16.6	0.741	0.310	0.197	0.146
Xqe	0.00513	0.00379	0.00357	0.00344	0.00327

B = maximum predicted adsorption = 287 mmol/kg.

Freundlich equation.

$C_e$ mmol/L	0.06	1.35	3.23	5.07	8.85
$q_e$ mmol/L	195	264	280	291	305
$\log C_e$	-1.22	0.130	0.509	0.705	0.836
$\log q_e$	2.29	2.42	2.45	2.46	2.48

Chemical #1 Acrylonitrile  $C_3H_3N$  molecular weight

$$S = 76,800 \text{ mg/L} \quad = 3(12) + 3(1) + 14$$

$$P_{vp} = 83 \text{ mmHg} \quad = 53 \text{ g/mole}$$

$$H = 1.1 \times 10^{-4} \text{ (atm} \cdot \text{m}^3\text{)/mole}$$

$$P_{vp} = \frac{83 \text{ mmHg}}{760 \text{ mmHg/atm}} = 0.1092 \text{ atm}$$

$$S = \frac{76,800 \text{ mg/L}}{53 \text{ g/mole}} \times \frac{1000 \text{ L}}{\text{m}^3} \times \frac{1 \text{ g}}{1000 \text{ mg}} = 1449 \frac{\text{moles}}{\text{m}^3}$$

$$H = \frac{P_{vp}}{S} = \frac{0.1092 \text{ atm}}{1449 \text{ moles/m}^3} = 7.536 \times 10^{-5} \text{ (atm} \cdot \text{m}^3\text{)/mole}$$

$$= 0.7536 \times 10^{-4} \text{ (atm} \cdot \text{m}^3\text{)/mole}$$

This value slightly less than  $1.1 \times 10^{-4} \text{ (atm} \cdot \text{m}^3\text{)/mole}$
