

Ice Class Rules

Description and Comparison

Claude Daley
Professor
Memorial University
St. John's, CANADA
April 2014

Faculty of Engineering
and Applied Science

Outline

- Main ice class rules and areas of application
- Short History
- Rule Comparisons
 - Design scenarios
 - Ice mechanics concepts
 - Strength formulations
 - Performance issues
- Equivalency Issues

Brazilian Research Vessel *Mar Sem Fim*, sunk by ice pressure, April 2012, Antarctica,

Ice Class Areas

Ice Class Rules have evolved from:

Government Policy

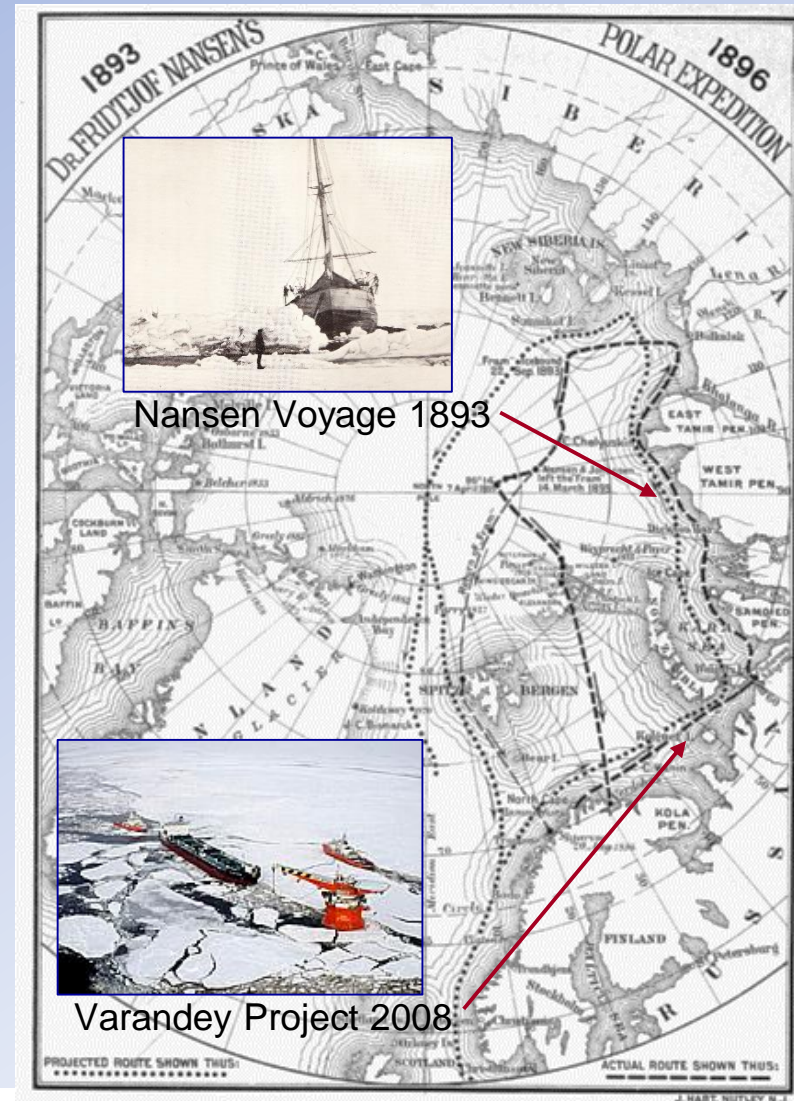

and

Classification Society Response to Clients

Short History of Ice Classes

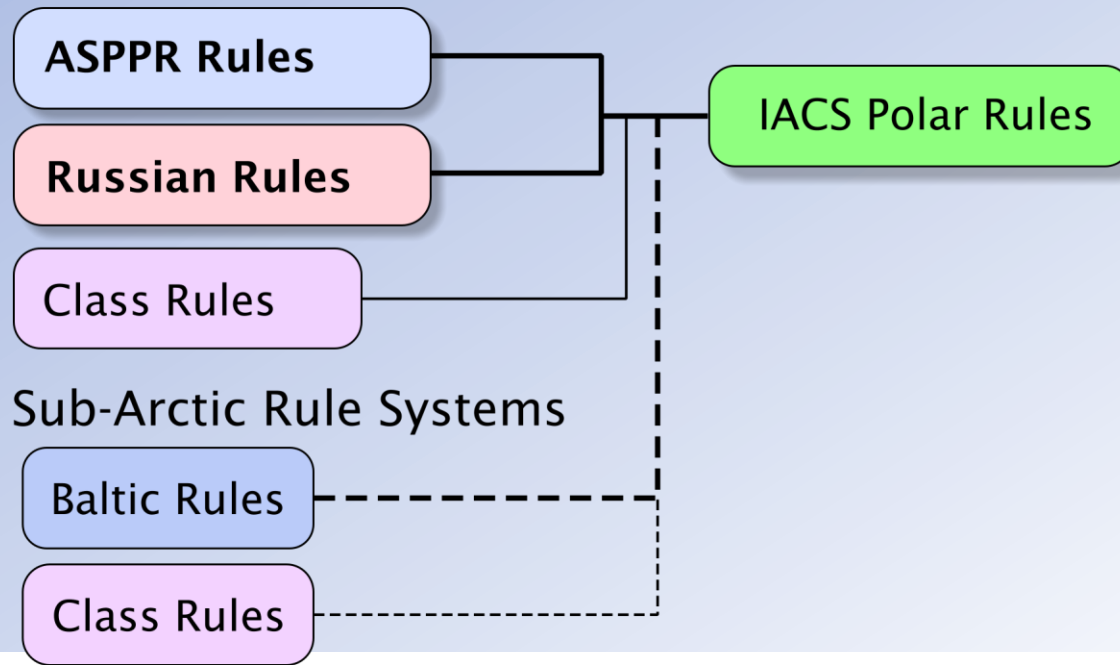

- 1890s-1960s
 - Finnish-Swedish (Baltic) rules evolved (1AS in 1965)
 - Early classification society rules
- 1970s-1980s
 - Baltic Rules revised in 1971,
 - First ASPPR Rules 1972, revised 89 ('95)
- 1990s-2000s
 - IACS Polar Rules developed (1992-2000)
 - RR revised (1995, 2008)
- 2012 - IACS UR fully adopted in ABS
- 2014 – IMO Polar Code (discussions underway)

IACS Polar Class Rules (URI)

The Polar Rules were developed by experts who represented the knowledge base behind the main ice class systems in the world, including Canada, Russia, Finland and Class Societies.

Arctic Rule Systems

Comparing Ice Class Rules

All rule system are unique. Each system uses its own unique approach to ice loads and strength, and arrives at a set of class requirements in its own way:

- Design scenarios
- Ice mechanics concepts
- Strength formulations
- Operational
- Parameters considered

Ice Class Design Scenarios

Most scenarios are 'nominal', IACS scenario is explicit

ASPPR Rules

Independent Ops
Heavy Ramming

Russian Rules

Icebreaker Escorting
Arctic ice

Baltic Rules

Icebreaker Leading
Ice in Channel

IACS Polar Rules

Independent Ops
Heavy Glancing

Ice Load Models

Force or pressure based

ASPPR Rules

Design load:
Ramming Model - F_{max}
+ Pressure-Area
Effect

Russian Rules

Design load:
Popov Glancing load
+ Khesin-Kurdumov
(extrusion model)

Baltic Rules

Design load:
empirical pressure

$$k = \sqrt{\Delta P} \quad p \quad \Delta$$

IACS Polar Rules

Design load:
Popov Glancing load
+ Pressure-Area
Effect

Ice Strengthened Hull Areas

Bow + others

ASPPR Rules

4 hull areas
bow, mid/stern, bottom
+ ice skeg

Russian Rules

13 hull areas
3x4 +bow

Baltic Rules

3+2 hull areas
~~lower and bottom~~

IACS Polar Rules

10 hull areas
3x3 +bow

Structural Strength Approaches

Plastic vs Elastic

ASPPR Rules

Plastic Capacity Models

Russian Rules

Plastic Capacity Models

Baltic Rules

Elastic Strength Models

IACS Polar Rules

Plastic Capacity Models

Traffic Management and Ice Performance

Safety Only vs Safety & Performance

Question: Do power and IB support help safety?

ASPPR Rules

No performance requirements
No Icebreaker support
- independent navigation
No Icebreaker support
- independent navigation
Canada uses Zone/Dates
+ Ice Regime System

Russian Rules

Ice performance assessed
- Icebreaker support may
be required for access
Russia uses Sea Areas and
Winter Severity Table

| | | | | |
|---------|----------|---|---|---|
| E.G. | Laptev | | | |
| | Ex H M E | | | |
| Arc8 IN | - | * | + | + |

Baltic Rules

Power Required
- Icebreaker support
provided (more strength =
lower fees)
TRAFI Manages with IB Fleet

IACS Polar Rules

No performance requirements
Just a construction standard
- actual navigation control left to others
- performance guidance (e.g. safe speed)
under development

Polar Classes

- **Lowest Polar Class (PC7):** should have general levels of strengthening roughly comparable to RRS Arc 5 and Trafi 1A
- **Highest Polar Class (PC1):** capable of independent operation without limitations, above Arc9 required for Russian Waters.
- The Polar Rules provide a minimum level of ice strengthening. All Polar Classes can encounter ice conditions that could damage the structure
- Ice Class is evolving.
Experience needed!

| | | RRS | IACS | |
|---|-----------|--|--|---|
| | | Arc9 ⁱ Arc8 ^e Arc7 Arc6 | PC1 PC2 PC3 PC4 PC5 | Year-Round Navigation in <u>Arctic</u> Waters |
| Winter Navigation in <u>Sub- Arctic</u> Waters | 1AS 1A | Arc5 Arc4 | PC6 PC7 | Summer Navigation in <u>Arctic</u> Waters |
| | 1B 1C | Ice3 Ice2 Ice1 | Notes: i - independent operation allowed in all Russian sea areas in all winters e - icebreaker escorted operation allowed in all Russian sea areas in all winters | |
| | TRAFI | RRS | | |

Icebreaking Hull Forms

Correspondence depends on hull form (formulations differ).

Ice Class Correspondence Tables

Correspondence depends on what is assessed.
