Q0. [6] True or false in each case. For propositional expressions A , B , and C and variable V :

- $A \leftrightarrow B$ is a contradiction if and only if A and B are not equivalent. false
If $A \leftrightarrow B$ is a conditional sentence then the expressions A and B will not be equivalent.
- If $A \leftrightarrow B$ is a tautology then $A[V := C] \Leftrightarrow B[V := C]$. true *By the principle of replacement.*
- If $A \Leftrightarrow B$ then $C[V := A] \Leftrightarrow C[V := B]$. true *This is just another way of stating the principle of substitution.*

Q1. [8] Classify each of the following sentences as a “tautology”, “contradiction”, or a “conditional sentence”. No proof is required

- $(P \vee Q) \wedge \neg P$ is a conditional sentence *It simplifies to $Q \wedge \neg P$*
- $P \wedge (P \rightarrow \neg P)$ is a contradiction *It simplifies to $P \wedge \neg P$*
- $P \leftrightarrow \neg P$ is a contradiction
- $(P \rightarrow Q) \wedge (Q \rightarrow P)$ is a conditional sentence *It simplifies to $P \leftrightarrow Q$*

Q2. [10] Give an algebraic proof of the following laws. Give a hint (the name of the law applied) for each step and underline to indicate the location of each use of the principle of substitution.

(a)

$$(P \rightarrow Q) \vee (R \rightarrow Q) \Leftrightarrow P \wedge R \rightarrow Q$$

Solution:

$$\begin{aligned} & \underline{(P \rightarrow Q)} \vee \underline{(R \rightarrow Q)} \\ \Leftrightarrow & (\neg P \vee Q) \vee (\neg R \vee Q) \text{ Definition of } \rightarrow \\ \Leftrightarrow & \underline{\neg P \vee \neg R} \vee Q \text{ Commutativity \& idempotence} \\ \Leftrightarrow & \neg(P \wedge R) \vee Q \text{ De Morgan} \\ \Leftrightarrow & P \wedge R \rightarrow Q \text{ Definition of } \rightarrow \end{aligned}$$

(b)

$$(\neg P \vee Q) \wedge (P \vee \neg Q) \Leftrightarrow P \leftrightarrow Q$$

Solution:

$$\begin{aligned} & \underline{(\neg P \vee Q)} \wedge \underline{(P \vee \neg Q)} \\ \Leftrightarrow & (P \rightarrow Q) \wedge (Q \rightarrow P) \text{ Definition of } \rightarrow \\ \Leftrightarrow & P \leftrightarrow Q \text{ Anti-symmetry of } \rightarrow \end{aligned}$$
