

SITE #1

March 13, 1986

B.D. O'Dell

K.S. Woolner

Ridge #1 (Solitary feature)

- consolidated multi-year ridge, 3m sail height
- $70\text{ m} \times 29\text{ m}$
- smooth rounded ridge, no blocks evident
- orientation: 010° T
- located 100 m east of cassion.
- this is considered a marginal hazard

Hole #1: -3.85m.

- 40cm freeboard.
- consolidated to 3.5m.

Site #2

March 19/86

Site #2

March 14, 1986

(1 of 3)

Location: On line 1, 450 m from MAC,
- an area of hummocks, second year ridges
and first-year ridging.
- ridged where the first-year meets the
second-year.

Features: Exposed Section (Block)

- 3.3 m long at top
- 2.5 m long at bottom
- second-year ice

Ridge 2a

- orientation $192^{\circ} T$
- consolidated with two exposed blocks, second year
- 50m long \times 16.5m wide
- 2m sail height
- second-year ice.

Hummock 2b

- consolidated, smooth
- 20 \times 20 m
- 1.8 m high

Site #2 (continued, 2 of 3)

- Ridge 2c
- orientation $090^\circ T$
 - consolidated second-year, smooth
 - 35 m long
 - 2.5 m sail height

- Ridge 2d
- orientation $180^\circ T$
 - unconsolidated first-year, blocks..
 - 2.5 m to 3.5 m high
 - starts at the east end of ridge 2c and continues along flow margin to the wake
 - approximately 500 m long.

- Hole 2a
- 1.4 m
 - freeboard 10 cm
 - level first-year ice

- Hole 2b
- 2.0 m
 - freeboard 25 cm
 - second - year ice

- Hole 2c
- > 4.5 m
 - small second-year hummock

Site #2 (continued, 3 of 3)

Notes: due to the density of hummocking and second-year ridging at the eastern edge of the floe backed by first-year ridging this area is believed to be hazardous.
