Proposed Project Title

Coffee Shop

Description of Project

I have a small retail/coffee shop that I can have the students design and

cost. It's only a single storey building but the students will have to go

through the typical design steps (develop loads, design options, estimating

etc.)

I was thinking of having them review various options such as timber frame

and steel frame. To add a little extra work I was also considering having

the students prepare specifications so they get some experience using the

national master specifications.

I believe most of the students can use AutoCad so they can also prepare

preliminary drawings.
