**Faculty of Engineering & Applied Science  
Memorial University of Newfoundland, Canada.**

**Supervisor: Prof. M. Tariq Iqbal**

31<sup>st</sup> January 2022

# OUTLINE

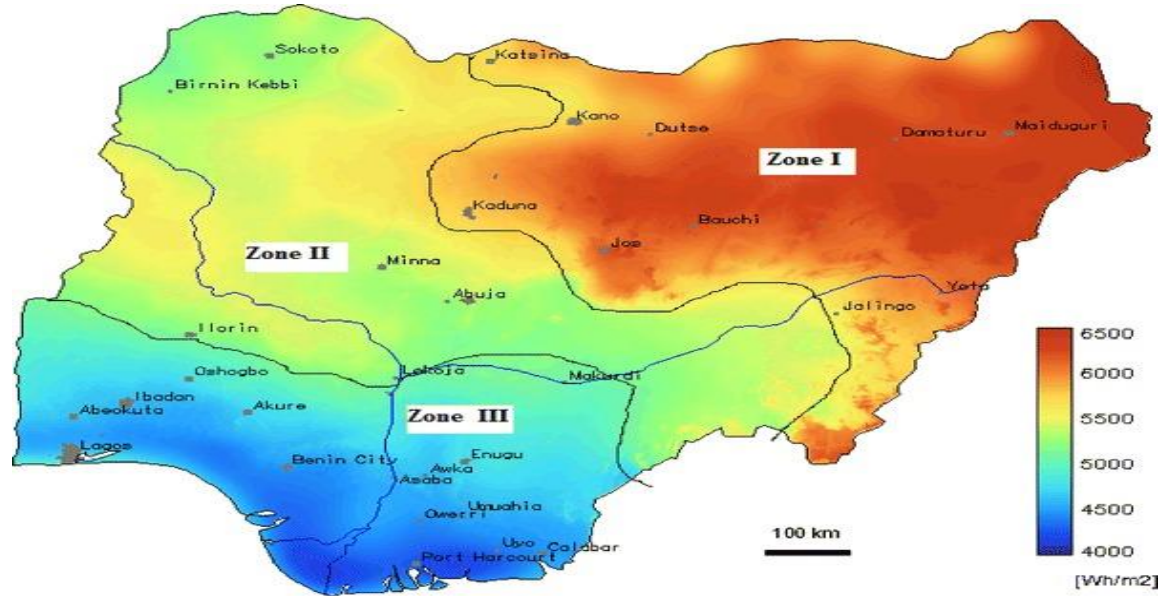

- Introduction
- Objective of the Study
- System Sizing and Analysis in Homer Pro for an off grid System
- System components
- Economic And Sensitivity Analysis of Proposed system PV system
- Dynamic Modelling, Simulation and Results
- Summary & Conclusion

# INTRODUCTION

- Nigeria is one of west Africa country with about 206 million population
- Greater population of Nigerians does not have access to Electricity. Hence the need for alternative energy.
- Most remote communities are cut off from the electricity grid
- The selected site is situated in Edo State, Nigeria. The community has 9 houses which are not more than 100m apart

# INTRODUCTION

- The average daily direct radiation reach about  $4.65\text{kWh/m}^2/\text{day}$  in Southern region of the country.
- With this high potential of solar that can be utilized as alternative source to supply part of the energy needs in Nigeria

*Solar irradiation in Nigeria*

| Deep Chest freezer     | 1        | 140              | 140               | 10               | 1.4                |
| Water Pump             | 1        | 750              | 750               | 0.2              | 0.15               |
| LED bulb               | 7        | 8                | 56                | 6                | 0.34               |
| Double arm streetlight | 2        | 70               | 140               | 3                | 0.42               |
| Total load:            |          |                  | 1.26kW            |                  | 3.4kWh             |

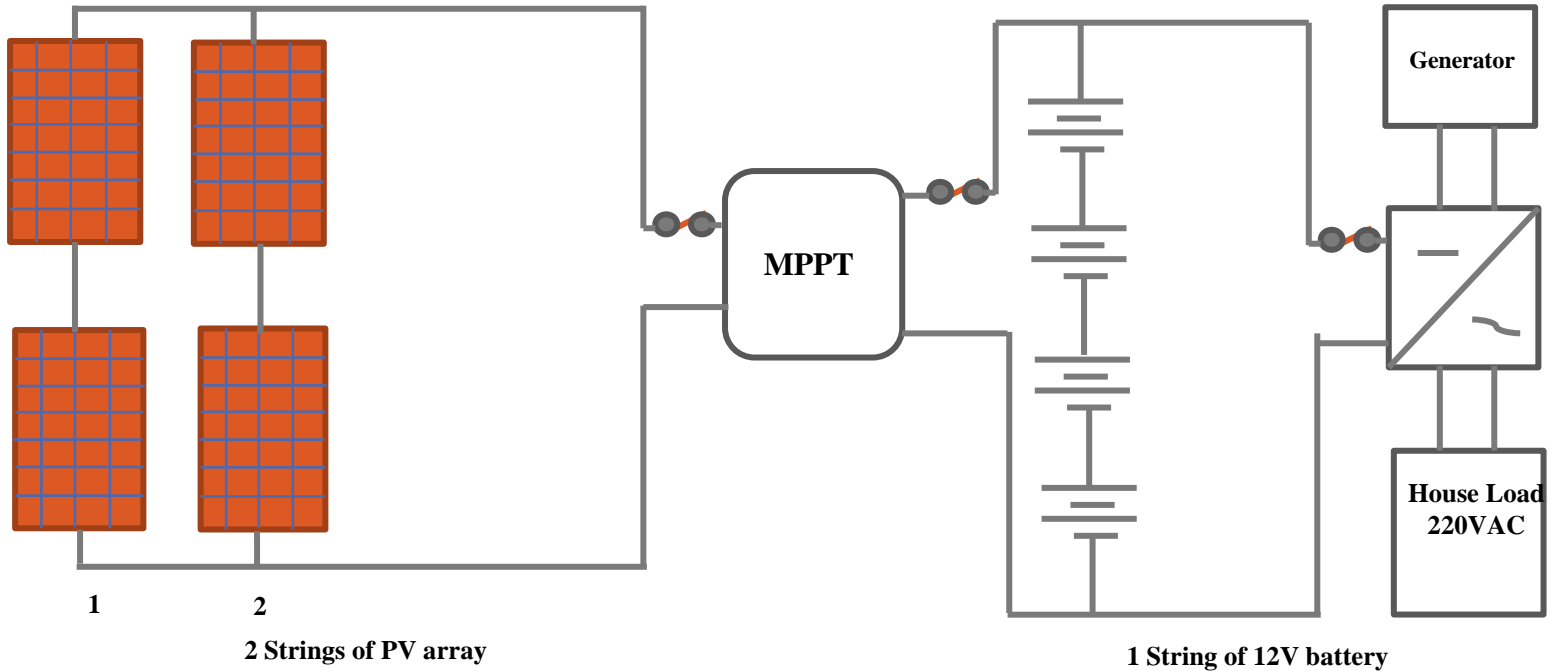

# SYSTEM COMPONENTS

All system components were selected using Homer Pro. The figure shows all components in a block diagram. Which consists of 4, 325W PV module, 4, 12V, 350Ahr, 4.8kW generator and 1.6kW inverter.

*Homer block diagram of all selected components*

# SYSTEM COMPONENTS

# SYSTEM COMPONENTS

- Using a 48V bus, system is made up of a 1.23kW PV comprised of 4 modules each of 325W ( 2 series and 2 parallel).
- MPPT
- The DC – DC buck converter
- Permanent magnet synchronous generator for charging the battery when the voltage of the battery goes below 49V due to inconsistency in solar resources.

# SYSTEM SIZING AND ANALYSIS FOR AN OFF-GRID RESIDENCE

- The scaled annual average solar irradiation is 4.63kWh/m<sup>2</sup>/day

*The monthly average solar irradiance of the selected site*

# SYSTEM SIZING AND ANALYSIS FOR AN OFF-GRID RESIDENCE

# SYSTEM SIZING AND ANALYSIS FOR AN OFF-GRID RESIDENCE

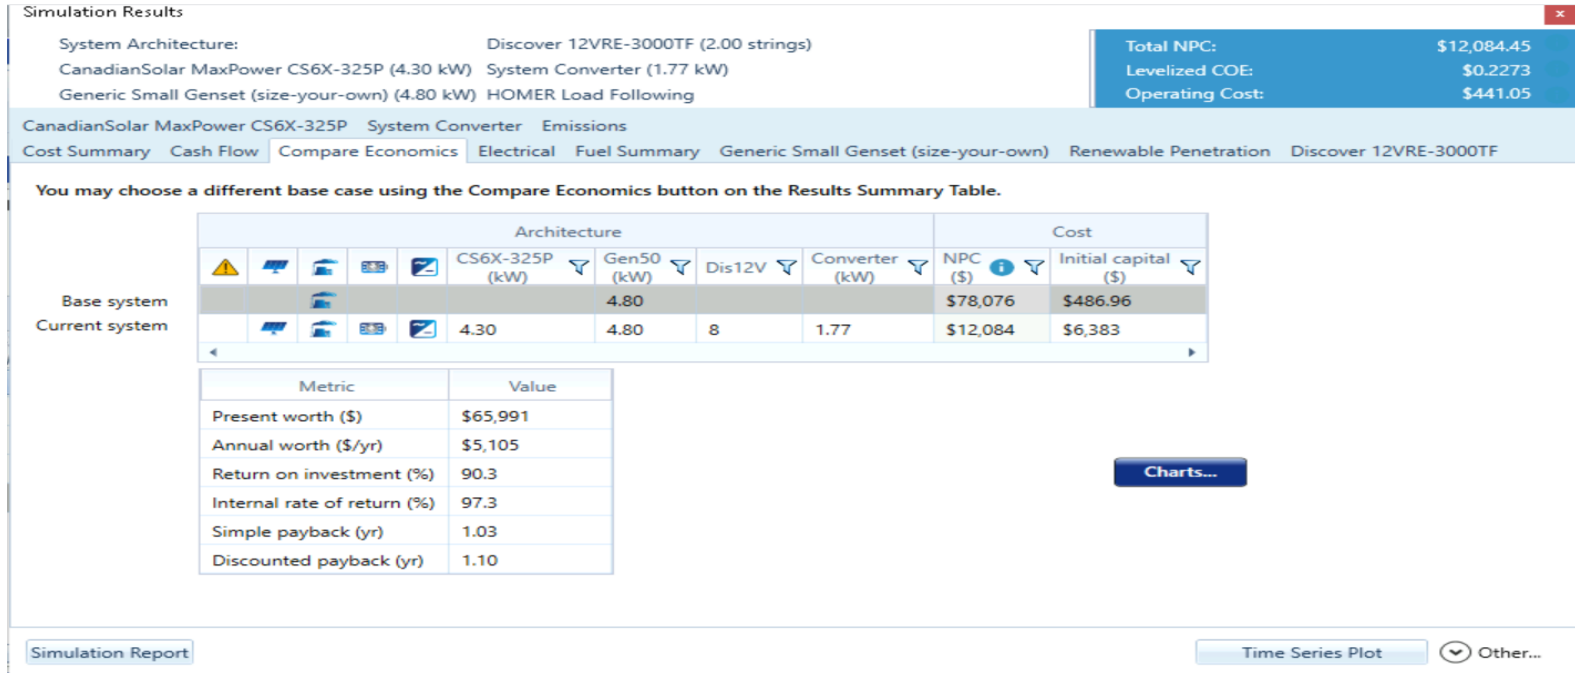

- Solar PV is the prime supply for powering the load and charging the battery
- The battery only operates as backup
- The battery is mostly a source of power supply at night or at rainy or cloudy days
- The emergency generator only operates if both cannot meet the load demand.

# ECONOMIC ANALYSIS OF PROPOSED PV SYSTEM

# ECONOMIC ANALYSIS OF PROPOSED PV SYSTEM

- The diesel generator only system is more expensive than the PV hybrid system

**Cost comparison between base and current system**

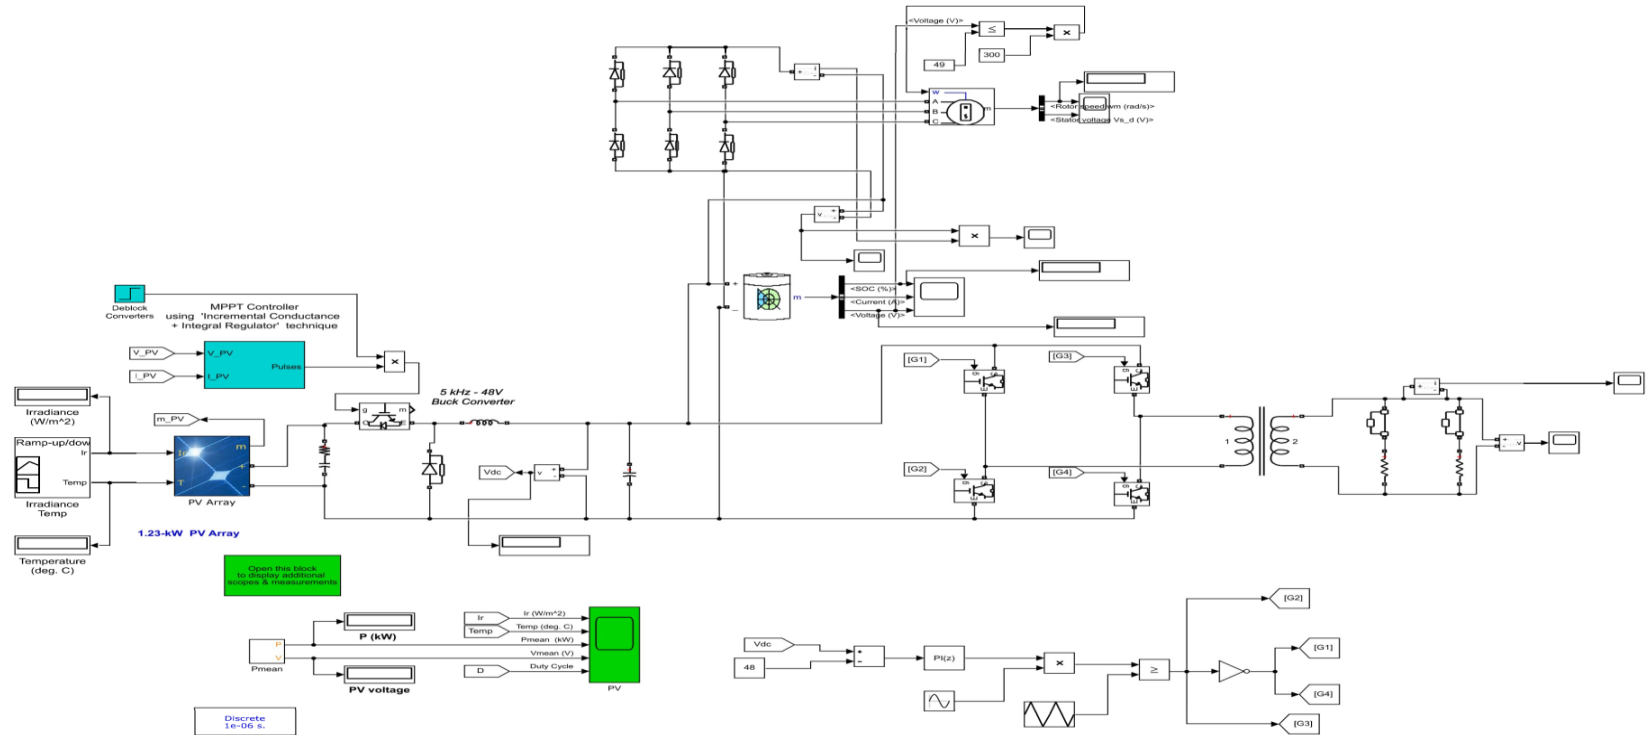

# SENSITIVITY ANALYSIS OF PROPOSED PV SYSTEM

| RESULTS                |   |                |            |   |                |                   |          |          |                        |                      |              |                   |        |  |  |  |                    |                   |

# **SENSITIVITY ANALYSIS OF PROPOSED PV SYSTEM**

- Sensitivity analysis is used to determine the adaptation of the system
- For this design, Sensitivity analysis was performed on Solar PV variation of 10% and load input variation of 20%
- Environmental factor such as cloudy weather, suspended dust could affect the efficiency of the PV
- Optimization result shows best configuration for optimal cost for the house in these conditions

# DYNAMIC SIMULATION AND RESULT

*PV-battery-generator hybrid system in Simulink*

# DYNAMIC SIMULATION AND RESULT

*Battery SOC and Voltage at half load and 50% SOC*

*Generator Power at half load*

# DYNAMIC SIMULATION AND RESULT

*Battery SOC and Voltage at full load and 98% SOC*

*Generator Power*

# SUMMARY

The performance of the system is evaluated under various conditions in MATLAB/SIMULINK. During this search, it became clear that the proposed stand-alone PV hybrid system with battery and emergency backup generator is stable, and it can fully meet the needs of the house load.

**Electrical output**

# SYSTEM SIZING AND ANALYSIS FOR AN OFF-GRID COMMUNITY

- Solar PV is the prime supply for powering the load and charging the battery
- The battery only operates as backup
- The battery is mostly a source of power supply at night or at rainy or cloudy days
- Excess energy produced from a PV is feed back into the microgrid

# SYSTEM SIZING AND ANALYSIS FOR AN OFF-GRID COMMUNITY

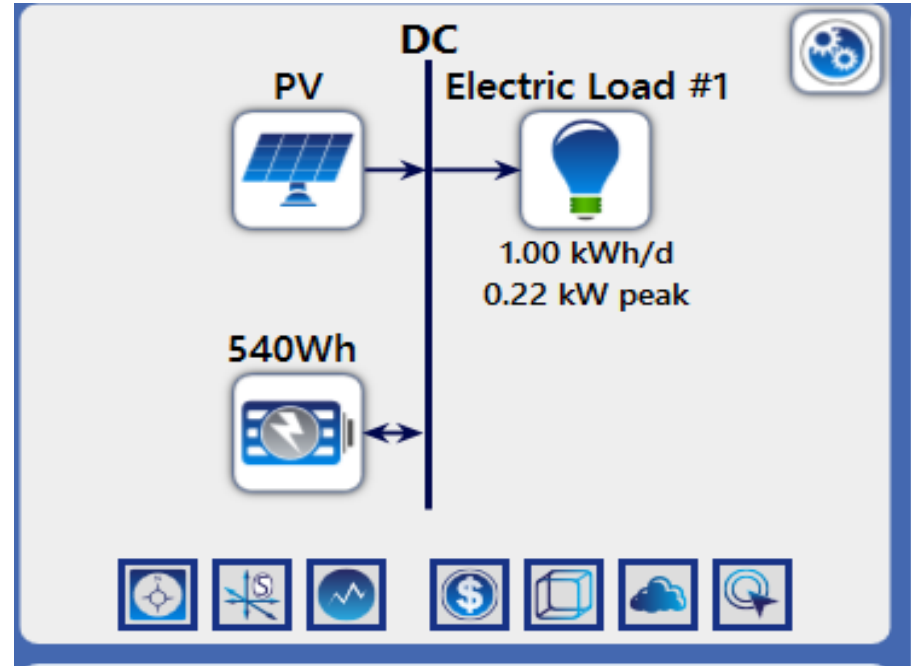

*block diagram showing load distribution of households in the community*

# SYSTEM SIZING AND ANALYSIS FOR AN OFF-GRID COMMUNITY

- The Figure above shows Load distribution of the 9 households in the community
- Each house has a PV system, battery bank
- Each house has a Switch to connect/disconnect to or from the microgrid.
- House 1 having an energy consumption of 1kWh/day is used as a reference
- Using house 1 as reference, a load variation of 10%, is used for load distribution from house 1 to house 9.

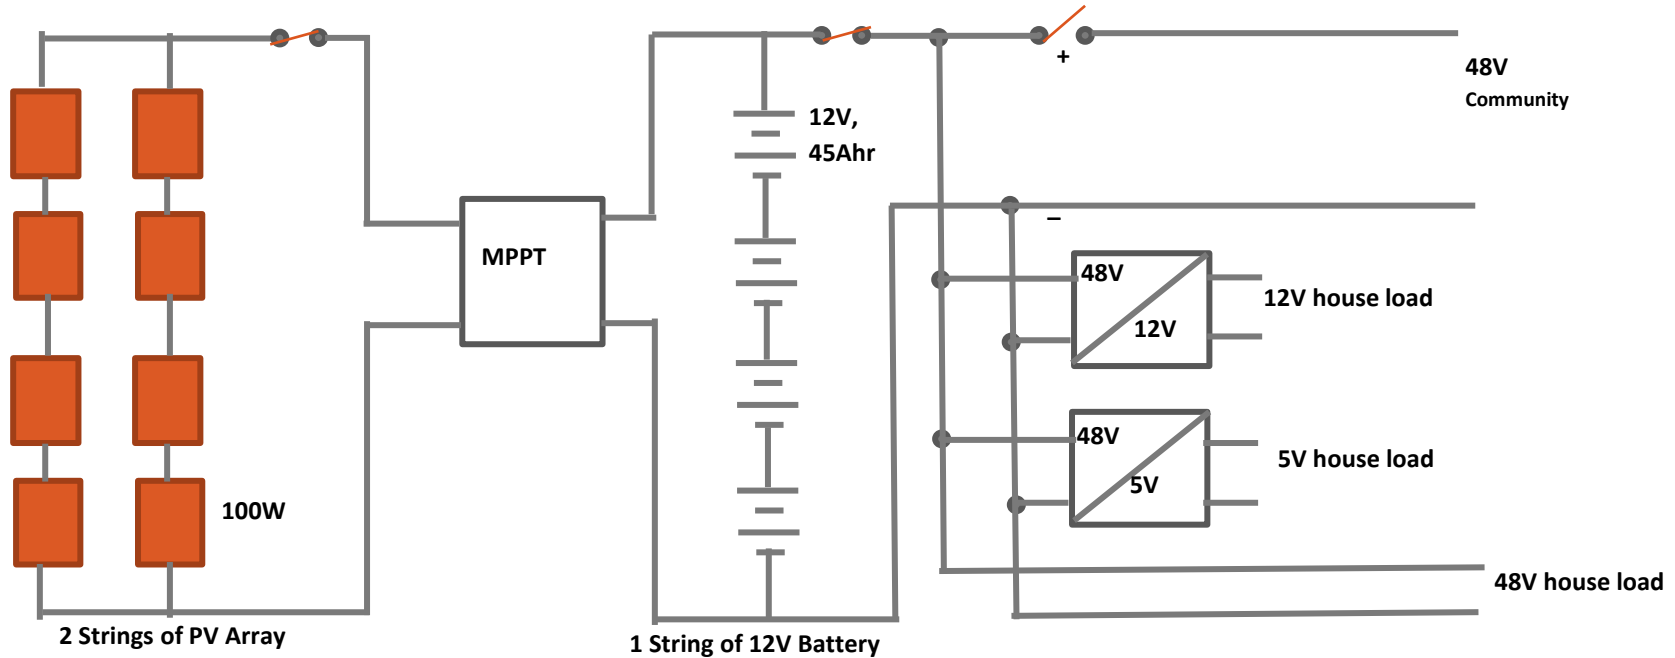

# SYSTEM COMPONENTS

All system components were selected using Homer Pro. The figure shows all components in a block diagram. Which consists 100W PV module, 12V, 45Ahr.

*Homer Pro system block diagram*

# SYSTEM COMPONENTS

*System component in a House*

# SYSTEM COMPONENTS

- House appliances such as lights, fans, refrigerators run on either 48V, 12V or 5V.
- DC-DC converters are used to convert bus voltages to house load voltage
- The System comprises of a 100W Solar Panel, battery of 12V, 45Ahr all connected to the 48V bus
- There is no inverter in the system
- Maximum Power Point Tracking (MPPT) ensures the PV reaches delivers maximum power

# EXAMPLE OF DC APPLIANCES

*12V,7W, LED bulb*

*12v Large Ceiling Fan*

**System design for each house in the community**

# ECONOMIC ANALYSIS OF PROPOSED PV SYSTEM

- Homer Pro performs economic analysis to determine the feasibility of implementing a system based on financial constraints.
- Result shows detailed breakdown of cost both installation and operation of the system which includes capital, Replacement, O&M cost, e.t.c.
- The total cost of all the components gives the Net Present Cost (NPC) of the system per household.
- For the house with a Load of 0.6kWh/d, result shows an NPC of \$2,407, Capital cost of \$1,004, O&M cost of \$108.49

# SENSITIVITY ANALYSIS OF PROPOSED PV SYSTEM

- Sensitivity analysis is used to determine the robustness of a design
- For this design, Sensitivity analysis was performed on Solar irradiation using a range of 4.14kWh/m<sup>2</sup>/day to 5kWh/m<sup>2</sup>/day
- Due to climate change solar irradiation could increase or decrease which conversely affecting PV efficiency
- Optimization result shows best configuration for optimal cost for each house in these conditions

# SENSITIVITY ANALYSIS OF PROPOSED PV SYSTEM

- Optimization surface plot with NPC and COE superimposed for remote Edo community for 4.145kWh/m<sup>2</sup>/day solar scaled average

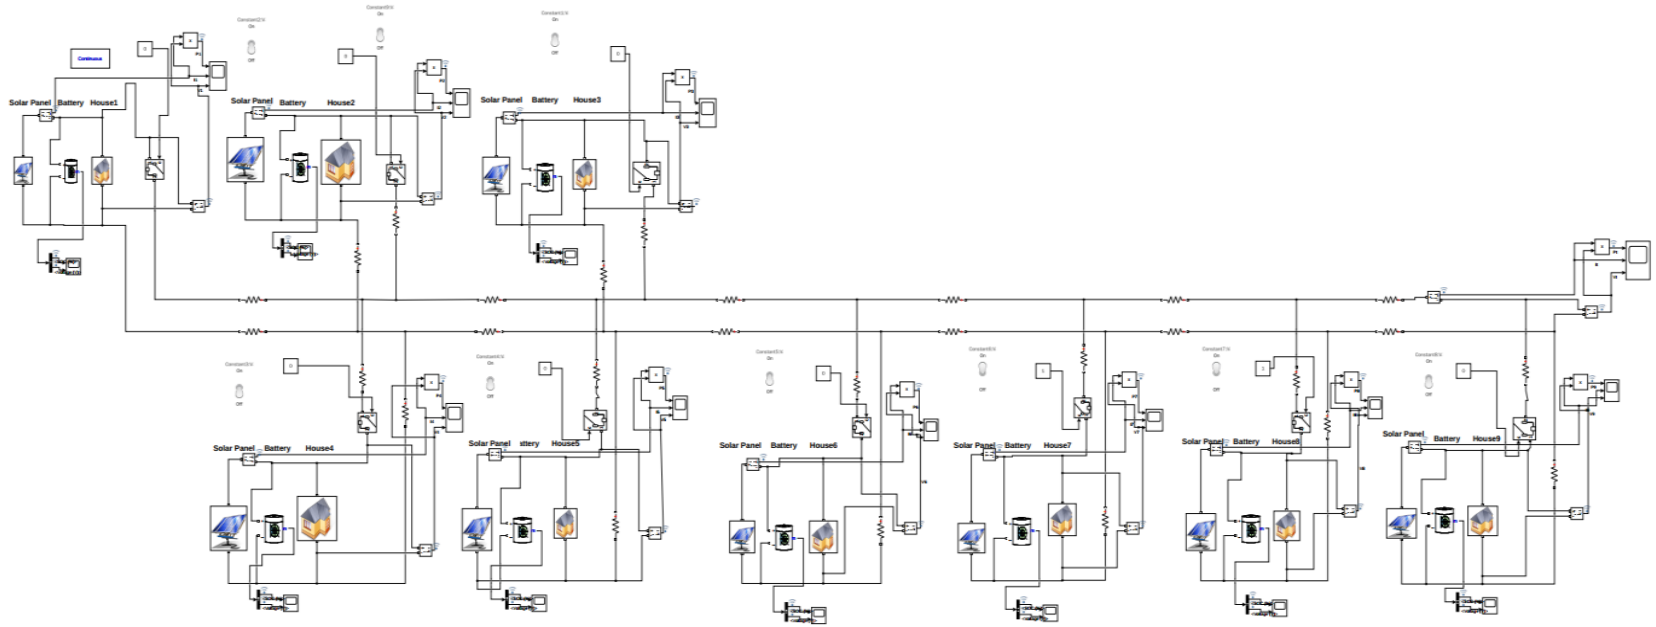

# SENSITIVITY ANALYSIS OF PROPOSED PV SYSTEM

- Optimization surface plot with NPC and COE superimposed for remote Edo community for 5.00kWh/m<sup>2</sup>/day solar scaled average

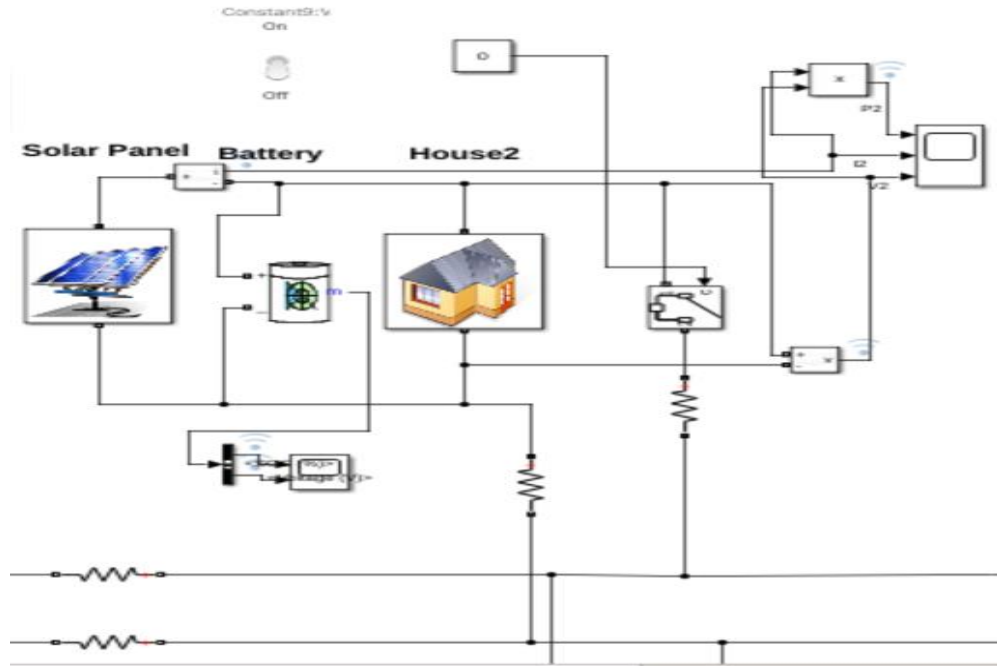

# DYNAMIC SIMULATION AND RESULTS

*Design of communal microgrid system in Simulink*

***Design connection of House 2 to Microgrid***

# DYNAMIC SIMULATION AND RESULT

*Power, Current of voltage of house 1.*

*The SOC of the battery and voltage.*

.....

# DYNAMIC SIMULATION AND RESULT

*Power, current and load voltage of House 2.*

*Battery Voltage and SOC of house 2*

# CONCLUSION

- A 48V DC bus system were used for the communal microgrid
- Modelling, sizing, and optimization for an off-grid PV-battery microgrid with DC load have been presented.
- A detailed economic and sensitivity analysis was done.
- The performance of the system is evaluated under various conditions in MATLAB/SIMULINK.
- During this search, it became clear that the proposed off grid PV-battery is stable, demonstrated power sharing , and can fully meet the needs of the community load.

# RESEARCH CONTRIBUTIONS

- A complete sizing and design of off grid PV system to supply power to remote areas in Edo State, Nigeria
- DC microgrid Power sharing system for remote community
- Use of DC bus system instead of AC
- Detailed economic and sensitivity analysis for various conditions
- Dynamic modelling of DC microgrid to show system stability and power sharing

# FUTURE WORK

- Addition of low cost open-source SCADA system for small scale renewable energy system.
- Application of wind energy system especially in Northern Nigeria where there is high wind energy and solar resources
- DC Microgrid renewable energy system for Northern Nigeria in areas with spatial residential/communities.
- Large Scale Grid-tied Hybrid system implementation in Nigeria.
- Implementation of Solar farms and Solar water pumps for communities in Northern Nigeria for agricultural and ranching purposes for improved agricultural experience and development in the agricultural sector.

# ACKNOWLEDGMENTS

- My gratitude goes to the Almighty GOD for his guidance, favour and blessings throughout my life journey and educational pursuit
- I express sincere appreciation to my supervisor, Dr. M. Tariq Iqbal for his unparalleled support, supervision and encouragement throughout the research
- I am thankful to my family, and friends for their encouragement, sacrifice and support.
- Thanks also goes to Soltech Nigeria Limited for providing graduate funding in support of my research.

**THANK YOU**
